

Enterprise-Wide Unified Transformation Roadmap

1-Year Roadmap

Consolidating 15 departmental audits into one connected operating system for EF Polymer

This roadmap consolidates the findings and proposed solutions from the CXO & department-level operational audit of all 15 functions — spanning the CEO, COO & CBDO offices, five Business Development verticals, MENA/International Sales, Finance, Marketing & Retail Sales, Production, R&D, Logistics and HR. Where the same solution surfaces across multiple departments, it is built once as a shared platform and rolled out company-wide, so that every system is interconnected through one company knowledge brain sitting on top of the spreadsheets already in use. Prepared as part of the EF Polymer Private Limited organisation-wide operational audit by Creative Upaay (brand owned by Cinnovate Solutions (OPC) Private Limited).

CLIENT	EF Polymer Private Limited
PREPARED BY	Creative Upaay
DOCUMENT VERSION	1.0
DATE ISSUED	17th July 2026
ROADMAP HORIZON	12 Months — Q1 to Q4 (FY 2026–27)
SCOPE	3 CXO Offices + 12 Departments / Verticals
MATURITY TRAJECTORY	1.6 (org. avg.) → 3.2 (target)

SECTION 01 — EXECUTIVE SUMMARY

From 15 Siloed Reports to One Operating System

The audit of all 15 functions revealed a single root cause behind the company's operational drag: every department runs on disconnected spreadsheets, WhatsApp groups and email threads, with data moving only when a person carries it manually from one tool to the next. Each report proposed its own fixes — but on closer reading, the same handful of solutions surface again and again across departments.

This roadmap does not build 15 separate systems. It builds **seven shared platforms** once, then layers each department's specific needs on top. A CXO dashboard, a unified CRM, a company knowledge brain, an HR/L&D platform, a WhatsApp agent, a vendor-production-logistics ERP and a finance engine — all connected through one backend that sits on the spreadsheets the teams already use today, with Google Drive as the document directory and WhatsApp, Slack & in-app notifications as the communication layer.

Headline Numbers Driving This Roadmap

15 AUDITED FUNCTIONS	7 SHARED PLATFORMS	~3,000 hrs CAPACITY RECLAIMED / YR	1.6 → 3.2 ORG. MATURITY (AVG.)
--------------------------------	------------------------------	--	--

Organisational Maturity Trajectory

The 1–5 scale from the departmental audits, averaged across all 15 functions. Today the company sits in the **"ad hoc / manual"** band; the roadmap lifts it to **"defined & integrated"** within 12 months.

Design principle — "extend, don't replace." Google Sheets, Zoho Books and WhatsApp stay as the systems of record that teams already trust. Intelligence (dashboards, AI, automation) is wrapped *around* them rather than forcing a disruptive migration. This is the same approach the Japan subsidiary already proved with its Slack approval bot.

SECTION 02 — THE ARCHITECTURE

Seven Shared Platforms, Built Once

Across 15 audits, the same solutions recurred. Consolidating them removes duplication, cuts cost and guarantees that every department speaks the same data language.

The table below maps the recurring solutions found in the department reports to **seven shared platforms**. Each platform is built once and then configured (with role-based access control) for the departments that need it. A department-specific solution that no other function needs is still delivered — but as a module *on* the relevant shared platform, not as a standalone tool.

SHARED PLATFORM	WHAT IT DOES	DEPARTMENTS IT REPLACES WORK FOR
1. EF OS — CXO Dashboard Q1	Single executive cockpit. Live P&L, sales pipeline, runway, approvals, budget-vs-actual, inventory & R&D ROI — one-click, role-based views for CEO, COO, CBDO.	CEO, COO, CBDO + every dept head (the top of every dashboard built downstream rolls up here).
2. Unified CRM Q1 Q2	One CRM, partitioned per BD/sales vertical with vertical-specific fields, pipelines & RBAC. WhatsApp API lead capture, stalled-deal alerts, receivables view. CXOs see all; reps see their book.	BD Cocopeat, BD Seed, BD NGO/CSR, BD Govt, BD B2B/RCM, MENA, Marketing/Retail, R&D trial pipeline.
3. Company Knowledge Brain Q2 Q3	RAG AI assistant over all product specs, SOPs, R&D trials, past proposals & policy docs. Self-serve answers for Sales/BD/CXOs; proposal & report drafting engine; replaces sub-par Zoho Zia.	All 15 — product knowledge, proposals, policy Q&A, technical support, onboarding.
4. WhatsApp Agent Q1 Q2	One WhatsApp Business AI agent sitting in every company group — parses field updates, marks attendance, ingests bills/POs, broadcasts, dunning, status queries, approval routing. No change to team behaviour.	Retail/Marketing, BD B2B/RCM, BD Govt, MENA, HR attendance, Finance bills, Production/Logistics alerts.
5. Vendor—Production—Logistics ERP Q2 Q3	One operational ERP over the existing sheets: vendor directory + MOQ optimiser, WIP/stock sync, structured order intake, shipment tracking, dispatch scheduler, vessel alerts. Single source of truth for materials, production & inventory.	Production, QC, Logistics, Finance (COGS/invoicing), Sales (dispatch readiness), BD (packaging lead times).
6. HR / Admin / L&D Platform Q2 Q3	Connected to HRMS: ATS + AI pre-screening, gamified PMS & incentives, admin ticket management, anonymous feedback & polling, L&D request portal + skills matrix, e-sign onboarding.	HR (owns), every HOD (hiring/PMS), BD/Sales (policy consumers), CXOs (approvals & talent visibility).
7. Finance Automation Engine Q2 Q4	Accounts frontend + AI recon: GST/TDS bot, smart bill scanner, vendor/client MDM, automated dunning, input-level expense policy bot, tax-change alerts, tonnage calc — all feeding EF OS.	Finance (owns), Sales/BD (collections & billing), Production (COGS), CXOs (investor reporting).

The Backend That Connects Everything

All seven platforms sit on top of **one company knowledge brain** — a unified data layer that treats the company's existing spreadsheets as the backend of record (no disruptive database migration). **Google Drive** is the document directory (auto-organised, RAG-indexed). Communications & notifications flow through three channels already in use —

WhatsApp (ground/domestic field), **Slack** (HQ & international) and **in-app dashboard notifications**. This is what makes "build once, use everywhere" possible.

SECTION 03 — TARGET SYSTEM ARCHITECTURE

How the Seven Platforms Connect

A layered architecture. The bottom layer is what teams already use; each layer above adds intelligence without ripping out what works.

▲ EXPERIENCE LAYER — WHO SEES WHAT (RBAC)

◆ PLATFORM LAYER — THE SEVEN SHARED SYSTEMS

● INTELLIGENCE LAYER — AI THAT DOES THE WORK

▲ BACKEND OF RECORD — "COMPANY KNOWLEDGE BRAIN" (NO MIGRATION)

📞 CHANNELS & NOTIFICATIONS — MEET TEAMS WHERE THEY ALREADY ARE

Why this works: every dashboard in every department report is really a *view* onto this shared stack. Marketing's Sales Dashboard, Finance's Accounts Frontend, Production's Inventory Dashboard and the BD pipeline views all read from the same Sheets/Zoho layer and write back to it — so a sale logged in CRM instantly updates Production demand, Finance invoicing and the CXO cockpit with zero manual hand-off.

The Spider-Web: How the Seven Platforms Interconnect

Every line is a live data path — not an export or a manual copy. Numbered chips map to the connection notes below.

Connection Notes

- EF OS ↔ Knowledge Brain.** CXO asks a question in natural language; the RAG brain pulls the answer from Sheets, Drive, Zoho & CRM and renders it inside the cockpit. **RAG**
- EF OS ↔ Unified CRM.** Live sales pipeline, stalled-deal alerts & receivables roll up into the CXO view. **LIVE**
- EF OS ↔ Finance Engine.** Real-time P&L, budget-vs-actual & runway drawn from Zoho Books/Expense/Payroll. **ZOHO API**
- CRM ↔ Prod-Logi ERP.** A closed sale writes demand into production planning & triggers dispatch readiness — no manual hand-off. **EVENT**
- ERP ↔ Finance Engine.** WIP, stock & overtime flow into COGS valuation & invoicing; stock-check before billing replaces phone calls. **BI-SYNC**
- WhatsApp Agent → CRM · ERP · Finance.** One agent ingests from every group: parses field updates into CRM, bills/POs into Finance, attendance/status into HR & ERP. No team behaviour change. **PARSE**
- Knowledge Brain ↔ Backend.** RAG indexes Sheets, Drive docs, Zoho & CRM DB as the single retrieval layer for every platform. **RAG**
- HR/Admin/L&D ↔ EF OS.** Hiring pipeline, PMS, budget utilisation & approvals surface in the cockpit; CXO approvals route back through HR. **LIVE**

Read the web, not the boxes. The power is in the *lines*: because every platform shares one backend, a single field update propagates everywhere. There is no "integration project" per department — integration is a property of the architecture, built once in Q1.

SECTION 04 — SYSTEM CONNECTIONS & DATA FLOW (CONTD.)

How Data Actually Moves — Three End-to-End Flows

The spider-web made concrete. Each step is automated; the only human action is the first one.

△ Flow 1 — A sale, from WhatsApp to CXO cockpit

Zero manual hand-off. Today this chain is 4–5 WhatsApp messages & phone calls across Sales → Production → Logistics → Accounts. Here, connection **6** ingests the message, **4** carries demand to the ERP, **5** values it, and **2/3** roll it up to the CXO.

EVENT-DRIVEN

△ Flow 2 — An expense / travel approval

Extends the **Japan Slack-bot model** company-wide (CEO finding P-03). Slab-based routing auto-decides who approves by amount; payout triggers Zoho disbursement. **SLACK + WA API**

△ Flow 3 — A technical / policy question

Replaces the 28–30 hr R&D query loop and HR policy DMs (connections **1** & **7**). Same brain drafts proposals & investor reports.

GEMINI RAG

Why the Web Beats the Silos

DATA EVENT	SYSTEMS UPDATED AUTOMATICALLY	TODAY
New lead / sale logged	CRM → ERP (demand) → Finance (invoice) → EF OS	4–5 MANUAL HOPS
Production batch ready	ERP → CRM (dispatch-ready) → Finance (WIP→FG) → EF OS	PHONE CALL
Payment clears (Zoho)	Finance → CRM (receivable cleared) → WhatsApp Agent (alert) → EF OS	MANUAL BD WARNING
Field WhatsApp message	Agent → CRM/Attendance/Drive → EF OS	MANUAL DATA ENTRY
Expense submitted	Agent → EF OS (approve) → Finance (payout) → HR (log)	EMAIL THREAD
Policy / technical query	Knowledge Brain ↔ Backend → answer	28–30 HR WAIT

The one rule that makes it all work: *nothing is copied between systems by a person.* Every arrow above is an API call, an event, or a RAG retrieval. That single discipline is what turns 15 spreadsheets into one operating system — and it is why the backend is built **first in Q1**, before any department dashboard.

Four Quarters, Four Maturity Jumps

Each quarter delivers working software — not slideware. Sequencing follows dependency: data foundation first, then the platforms that consume it, then intelligence, then scale.

The roadmap is sequenced so that each quarter unlocks the next. **Q1** stops the bleeding (approvals, data capture, knowledge brain MVP, ERP foundation). **Q2** builds the core platforms on top of that foundation (CRM, dashboards, HR/Finance). **Q3** layers in AI & cross-department automation. **Q4** scales, optimises and rolls out to MENA/international expansion.

● Quarter 1 — Foundation & Quick Wins

[Org. 1.6 → 2.2](#)

Months 1–3 · "Stop the bleeding" · Build the backbone

WHAT WE BUILD

- **Multi-channel Approval Engine** (EF OS Module 1) — extend the Japan Slack-bot model company-wide via Slack + WhatsApp API + dashboard. RBAC routing; auto-log to trackers; triggers Finance disbursement. *(CEO, COO, CBDO, HR, all BD)*
- **Company Knowledge Brain — MVP** — RAG assistant over product specs, SOPs & policy docs. Leverages the already 60–70%-built Creative Upaay chatbot. Self-serve Q&A for Sales/BD; replaces sub-par Zoho Zia. *(All depts)*
- **WhatsApp Agent v1** — deployed into Retail & BD B2B/RCM groups: auto-extract CRM data, mark attendance from location shares, ingest bills/POs to Drive. *(Marketing, BD B2B/RCM, HR attendance)*
- **Production–Logistics ERP foundation** — bi-directional sync of the 5+ inventory sheets into one Inventory Dashboard with WIP/stock visibility & red alerts. Structured order-intake form (kills WhatsApp-order chaos). *(Production, Logistics, Finance)*

CLIENT TO-DOS & DEPENDENCIES

- HR + Finance retire email/DM expense & travel submissions within 14 days; define approval thresholds & budget slabs.
- Provide Google Workspace + WhatsApp Business API + Zoho Books API access; share home/field coordinate file for attendance.
- Organise Drive folders for RAG grounding (policies, product specs, SOPs); CXOs confirm RBAC roles.
- CBDO issues top-down mandate: legacy BD verticals adopt standard pipeline tracker as CRM stop-gap (P1 discipline prep).

Quarter 2 — Core Platforms Roll-Out

● Quarter 2 — Core Platforms Roll-Out

[Org. 2.2 → 2.8](#)

Months 4–6 · Build the systems the foundation enables · Highest-impact quarter

WHAT WE BUILD

- **Unified CRM launch** (React + Node) — partitioned per BD vertical (Cocopeat, Seed, NGO/CSR, Govt, B2B/RCM) + MENA + Retail, each with vertical-specific fields & RBAC views. Migrate spreadsheets; WhatsApp API lead insertion; corporate ownership of all contacts (kills data-leakage risk). *(All 5 BD, MENA, Marketing)*
- **EF OS — CXO Dashboard full launch** — live P&L, sales pipeline, runway (6+ month forecast), budget-vs-actual, dispatch & R&D ROI. Zoho Books + Expense + Payroll + CRM + Production/Logistics sheets all feed in. *(CEO, COO, CBDO)*
- **Finance Automation Engine** — Accounts Frontend Dashboard (real-time stock/WIP, tonnage calc, unified CXO view), GST/TDS Recon Bot, Smart Bill Scanner (OCR → Zoho Expense), Vendor/Client MDM with GST gates. *(Finance, Sales, Production)*
- **HR / Admin / L&D Platform (Phase 1)** — WhatsApp-native admin ticketing (LangGraph), slab-based budget approval routing, ATS connecting LinkedIn/Naukri/Indeed/Apollo, AI pre-screening, onboarding automation & e-sign. *(HR + all HODs)*
- **Logistics Dispatch Scheduler + Zoho Books API** — structured intake, auto doc generation to Drive, carrier/vessel tracking. Sales mandated to order via form only. *(Logistics, Accounts, BD)*

CLIENT TO-DOS & DEPENDENCIES

- Finance: standardise Zoho Books tagging (region, client, expense category) — it is the data-quality gate for every dashboard.
- HR: design mandatory CRM/knowledge-hub adoption programs; link CRM data hygiene to sales PMS (change management is the #1 adoption risk).
- R&D: structure trial data into standardised case-study cards; co-design MENA/R&D trial intake form.
- Logistics Manager commits to priority export routing windows; provides historical GST recon sheets & sample invoices to train AI.

Quarters 3 & 4 — Intelligence, Automation & Scale

● Quarter 3 — AI & Cross-Department Automation

[Org. 2.8 → 3.1](#)

Months 7–9 · Layer intelligence on top of the core platforms

WHAT WE BUILD

- **Knowledge Brain → full SSOT** — proposal & report drafting engine (RAG over Drive), AI lead discovery (LinkedIn feed scanner), DAM for marketing collaterals, single-source-of-truth technical answers for BD/Sales. (*R&D, BD, Marketing, CEO*)
- **WhatsApp Agent v2** — Gemini community bot (FAQs, retargeting, dunning, status queries), CargoX/export-doc clearance alerts, payment-clearance triggers to Logistics, policy chatbot on WhatsApp + Slack. (*Finance dunning, BD, MENA, HR*)
- **ERP intelligence** — AI vendor MOQ optimiser & custom-packaging forecasting, overtime/COGS auto-calc to Accounts, predictive inventory sync (replaces RCM 40kg reactive alerts), carrier API vessel alerts. (*Production, Logistics, Finance, BD*)
- **HR Phase 2 — PMS & L&D** — gamified monthly KPI/KRA dashboard, 0–5 rating digitisation, incentive automation, skills-matrix directory, L&D request portal, anonymous feedback & polling. (*HR, all depts*)

CLIENT TO-DOS & DEPENDENCIES

- BD/Sales: provide past proposals & collateral to ground the RAG drafting engine; confirm target regions for outbound.
- Finance: own & configure dunning cadence (30/45/60-day); approve Virtual Business Lines for MENA/China comms migration.
- R&D: sign off trial-request fields; feed continuous product/formulation data to the Knowledge Brain.

↓ **40–50%****PROPOSAL DRAFTING**

● Quarter 4 — Scale, Integration & International Expansion

[Org. 3.1 → 3.2](#)

Months 10–12 · Connect everything into EF OS · Scale to MENA/Japan/EU

WHAT WE BUILD

- **Full EF OS integration** — every department dashboard rolls up into one role-based cockpit. Enterprise RAG AI agent over Sheets/WhatsApp/Gmail/R&D logs answers CEO operational queries; LLM board/investor report auto-generated from live data. (*CEO, COO, CBDO*)
- **MENA & International scale** — Virtual Business Lines live (company-owned, not personal SIM/WeChat), region case studies, Apollo/Sales Navigator outbound, CargoX regulatory buffer engine, Japan D2C launch integration. (*MENA, BD Cocopeat*)
- **External Vendor & Partnership Portal** — vendor onboarding, contract milestones, meeting logs (shared HR + Finance + Production). RCM ERP API bridge (or spreadsheet fallback) for tertiary retail visibility. (*COO, Production, BD B2B/RCM*)
- **Predictive & governance layer** — AI sales/demand & COGS forecasting (90-day production forecasts), AI deal scoring, predictive attrition analytics, automated asset register. (*CXO-level*)

CLIENT TO-DOS & DEPENDENCIES

- CXOs: finalise org-wide RBAC matrix; ratify the unified OS as the single system of intelligence.
- MENA: HR formalises comms & device-ownership policy; complete migration to Virtual Business Lines.
- Finance: complete sustained-usage review; agree quarterly data-quality audits to keep dashboards accurate.

Logistics	✓ Q2	—	✓ Q3	✓ Q3	✓ Q1	—	✓ Q2
HR / Talent	✓ Q2	✓ Q3	✓ Q2	✓ Q2	—	✓ Q2	✓ Q2

Read this matrix top-to-bottom: no department is left without coverage, and no platform is a one-off — the average platform serves **11 of 15** departments. That is the economic and operational case for building shared instead of siloed.

SECTION 07 — MATURITY TRAJECTORY BY DEPARTMENT

Where Each Function Lands After 12 Months

Current and target maturity scores pulled directly from each department's audit report. The roadmap lifts the lowest functions the most.

DEPARTMENT / FUNCTION	CURRENT	TARGET	GAP	PRIMARY PLATFORM(S) DRIVING THE LIFT
CEO Office	1.9	3.1	1.2	EF OS · Knowledge Brain
COO Office	1.5	3.2	1.7	EF OS · HR/Admin · Finance
CBDO / Sales	1.3	3.0	1.7	Unified CRM · EF OS
BD — Cocopeat	1.3	2.7	1.4	Unified CRM · Finance Engine
BD — Seed	1.4	3.0	1.6	Unified CRM · Knowledge Brain
BD — NGO/CSR	1.4	3.0	1.6	Unified CRM · Finance Engine
BD — Government	1.7	3.0	1.3	WhatsApp Agent · HR/Admin
BD — B2B/RCM	1.3	3.0	1.7	Unified CRM · WhatsApp Agent
MENA / International	2.0	3.1	1.1	Unified CRM · Prod–Logi ERP
Finance & Accounts	2.2	3.3	1.1	Finance Engine · Prod–Logi ERP
Marketing / Retail	1.4	3.1	1.7	WhatsApp Agent · Unified CRM
Production / QC	1.5	3.2	1.7	Prod–Logi ERP · Finance Engine
R&D	1.5	3.2	1.7	Knowledge Brain · EF OS
Logistics	1.6	3.0	1.4	Prod–Logi ERP · Finance Engine
HR / Talent	1.6	3.4	1.8	HR/Admin/L&D · Knowledge Brain
Organisation average	1.6	3.1	1.5	All seven shared platforms

The Five Maturity Dimensions (Org. Average)

Solid = current org. average. Dashed = post-roadmap target.

Technology Utilization and Data Quality are the two most broken dimensions today (both ~1.4/5) — the direct result of spreadsheet silos and manual data movement. The shared-platform architecture targets both at ~3.4, which is where the largest, fastest gains come from: every dashboard, CRM and ERP rollout in Q1–Q2 attacks exactly these two dimensions.

Knowledge Management (1.5 → 2.7) is lifted last, by the Knowledge Brain RAG rollout in Q3.

Who Unblocks Whom

The platforms are interconnected, and so are the departments. Three people are the critical path for the whole programme.

1 · Finance (Shobha Shekhawat) — the data-quality gate

CRITICAL PATH

Zoho Books is the source of truth for P&L, invoicing, COGS and collections. **Every dashboard in the company reads from it.** If Finance does not standardise tagging (region, client, expense category) and grant API access early, EF OS, the Finance Engine and the BD receivables views all degrade. Finance also owns automated dunning (NGO/CSR's 60–70 day receivables), CargoX clearance alerts (Cocopeat export) and the Smart Bill Scanner.

EF OS

Finance Engine

BD Collections

Prod–Logi COGS

2 · HR (Dolly Mehta) — the adoption gate

CRITICAL PATH

New tools fail without change management. HR must drive CRM/knowledge-hub adoption programs, retire email/DM expense submissions, link CRM data hygiene & pipeline health to the sales PMS, and formalise the device/comms-ownership policy for MENA migration. The audit flagged **"legacy team resistance to tech adoption"** as a Critical risk in the CBDO report — HR is the mitigation.

CRM Adoption

PMS Linkage

HR/Admin/L&D

MENA Migration

3 · Operations chain — Sales → Production → QC → Logistics → Accounts

OPERATIONAL CHAIN

A sale logged in CRM must flow to Production (demand), QC (lot assignment), Logistics (dispatch) and Accounts (invoicing) with **zero manual hand-off**. Today each link is a WhatsApp message or phone call. The Prod–Logi ERP + structured intake form + Zoho Books API close this loop. Logistics (Nihal Paliwal) is the single-point bottleneck cited in **5 of 5 BD reports + MENA** — the Dispatch Scheduler directly unblocks him.

Prod–Logi ERP

Unified CRM

Structured Intake

Zoho API

4 · R&D (Ritu Panwar) — the knowledge & trial feed

ENABLER

R&D is a dependency for BD (technical inputs & proposal case-studies), Marketing (collateral), the CEO's field-efficacy loop and MENA (trial intake form). Structuring trial data into standard case-study cards and feeding the Knowledge Brain turns R&D from a 28–30-hour query bottleneck into a self-serve resource.

Knowledge Brain

Proposal Engine

Trial Intake

Sequencing rule: Q1 builds the shared foundation (approvals, knowledge-brain MVP, ERP data layer, WhatsApp capture) *before* any department-specific dashboard — because every downstream dashboard depends on that data being clean and flowing. Skipping Q1 to jump straight to a department view replicates today's silo problem in a newer tool.

SECTION 09 — RISKS & MITIGATIONS

What Could Derail This — and How We Prevent It

Risks surfaced directly from the departmental audits, with the mitigation baked into the roadmap design.

RISK	SEVERITY	SOURCE	MITIGATION IN THIS ROADMAP
Legacy team resistance to new tools	CRITICAL	CBDO report (P-05); Production (abandoned Zoho WMS); R&D (abandoned Asana)	"Extend, don't replace" — teams keep Sheets/WhatsApp; intelligence wraps around them. HR-led adoption programs + PMS-linked data-hygiene metrics. Q1 stop-gap tracker before CRM to build habit.
Single-point-person dependencies	CRITICAL	Logistics (Nihal); BD Seed (Sameer solo); Marketing data (Kamakshi); R&D (Ritu)	Shared platforms de-personalise knowledge & data — WhatsApp Agent captures field data, Knowledge Brain holds R&D IP, ERP holds logistics state. Corporate-owned Virtual Business Lines protect contacts.
Finance data quality gates every dashboard	CRITICAL	CEO P-02; COO; Finance P-01/P-06	Finance standardisation is a Q1 client to-do, ahead of the Q2 EF OS launch. AI GST/TDS Recon Bot + Smart Bill Scanner enforce input-level quality.
WhatsApp as unaudited single channel	HIGH	5/5 BD reports; Marketing (10,000+ msgs/day); MENA (personal SIM)	WhatsApp Agent ingests from inside the groups — no behaviour change for ground teams — while structuring data into the backend. Virtual Business Lines migrate personal contacts to company ownership.
Implementation bandwidth	HIGH	Cross-cutting (15 functions, lean teams)	Build-once shared platforms (not 15 bespoke systems); phased quarterly delivery with working software each quarter; client to-dos clearly scoped per quarter.
Data continuity / IP walk-out	HIGH	BD B2B/RCM (90% on personal WhatsApp); MENA (personal SIM/WeChat)	Unified CRM = corporate ownership of all contacts; Virtual Business Lines; WhatsApp Agent auto-logs every interaction to the backend.
Seasonal / vessel-window misses	MEDIUM	BD Seed (sowing window); Logistics/Cocopeat (vessel cutoff, CargoX 10-day)	Seasonal-window & vessel alerts baked into CRM & ERP; CargoX regulatory buffer engine; structured intake enforces mandatory fields up front.

The biggest risk is not technical — it is adoption. Two prior tools (Zoho WMS in Production, Asana in R&D) were built and then abandoned. This roadmap is deliberately designed around the tools teams already use, with HR-anchored change management and PMS-linked accountability, precisely to avoid a third abandonment.

SECTION 10 — AGGREGATE ROI

Capacity Reclaimed Across the Company

Hours-per-year figures summed from each department's stated ROI. This is leadership bandwidth and operational capacity returned to the business — not just time saved.

~3,000 HOURS / YEAR RECLAIMED	~375 WORKING DAYS / YEAR	7 SHARED PLATFORMS (NOT 15)	1.6 → 3.2 MATURITY LIFT (ORG. AVG.)
--	------------------------------------	--	--

Where the Hours Come Back

FUNCTION	HRS/YR RECLAIMED	PRIMARY TIME DRAIN REMOVED
CEO Office	~300	Manual data harvesting for P&L & approvals
COO Office	~252	Email triage (50–80/day) & 150+ WhatsApp groups
Marketing / Retail	~1,680	WhatsApp data entry & manual attendance (6–8 hrs/day)
Finance & Accounts	~300	Manual GST/TDS recon & tonnage compilation
HR / Talent	~420	Manual CV screening & admin tickets on WhatsApp
Production / QC	~384	Inventory sheet reconciliation & CXO reporting
R&D	~264	Proposal drafting & approval delays
Logistics	~240	Chasing missing order fields & double data entry
BD — NGO/CSR	~216	Manual dunning & 4-sheet pipeline assembly
BD — B2B/RCM	~192	Paper-diary transcription & reactive inventory
BD — Seed	~168	Manual R&D data extraction for proposals
MENA / International	~144	Manual payment warnings & trial setup
BD — Cocopeat	~120	Siloed lead pipeline & CargoX chasing

The strategic point: ~375 working days a year of capacity is roughly **1.5 full-time executives** worth of bandwidth — redirected from data-shuffling to revenue generation, international expansion, R&D and investor relations. For the CEO alone, that is ~37.5 working days/year moved from admin to strategy.

CXO & BD Vertical Findings

The specific pain points, people and tools the synthesis compressed — one card per function, drawn verbatim from each audit report.

CEO Office

Narayan Lal Gurjar. 1.9 → 3.1

- **1–2 mo forecast runway** → target 6+ mo; cripples procurement & manufacturing planning.
- **No unified dashboard** — manual data-harvesting across Sheets/Zoho for region P&L.
- **Travel/expense approvals** unstructured email/DMs in India & MENA; Japan already runs a Slack bot.
- **Siloed farmer/field feedback** not reaching R&D or marketing.

TOOLS: Slack · Google Sheets · Google Drive · WhatsApp · Gmail · Zoho Books

COO Office

Puran Singh Rajput. 1.5 → 3.2

- **50–80 emails/day + 150+ WhatsApp groups** — ~2 hrs/day triage, largest time drain.
- **PMS "non-existent"**; appraisals by memory; incentives manual in Sheets.
- **18–20 (up to 60–80) cultural-fit interviews/role.**
- **Zoho Zia chatbot flagged "subpar."** Board decks assembled manually from sheets.

TOOLS: WhatsApp · Google Sheets/Forms · Zoho (Books/Expense/Payroll/People) · Gmail · Slack

CBDO / Sales

Ankit Jain. 1.3 → 3.0 (lowest baseline)

- **No CRM at all** — lead ownership invisible; manual meetings to find account owners.
- **WhatsApp siloed per employee** — no client history capture; turnover = leakage.
- **Retrospective monthly reporting** only; no live pipeline view.
- **Legacy team "massive behavioral resistance"** to even Google Sheets. **CRITICAL**
- Existing **Creative Upaay chatbot 60–70% built** (product/CRM knowledge hub).

TOOLS: Google Sheets (Cocopeat only) · WhatsApp (primary) · Slack · Gmail

BD — Cocopeat

Mohit Kumar Gupta. 1.3 → 2.7. Export (UK/EU/ME) + Japan D2C

- **CargoX 10-day export-doc window** gated behind manual Accounts payment clearance → demurrage risk.
- **Country permits (Egypt ACID, Peru, Spain)** — 20–25 day embassy wait.
- **6–10 hr ad-to-lead lag** (timezone gaps).
- **Cold outbound on primary domain** — blacklisting risk.
- Rajesh Balu only 10–20% on BD; 80–90% logistics/product. ~5% response rate.

TOOLS: Google Sheets/Excel · Gmail · LinkedIn + Dripify (lapsed) · WeChat · LINE · CargoX · Google/LinkedIn Ads (Obverse)

BD — Seed

Sameer Vishnuji Mahiskar. 1.4 → 3.0. Institutional pan-India, 90 MT

- **Dual reporting line** — reports to both COO & CBDO (conflicting priorities). *Process fix, not software.*
- **Solo-person operation** — entire 90 MT on one person; South India role vacant. *Headcount fix.*
- **Memory-based follow-up**; 25–30 leads on local Sheets; traveling 15–20 days/mo.
- **1–2.5 day proposal creation** — manual R&D data extraction from unstructured Drive.
- **Sample dispatch SLA with Logistics missing**; sowing-window miss = 6–12 mo loss.

TOOLS: Google Sheets · ChatGPT · Google News · Canva/PowerPoint · WhatsApp · Gmail · Drive (R&D, unstructured)

BD — NGO & CSR

Vikash Mehta & Gaurav Dwivedi. 1.4 → 3.0. Bulk supply, 100 MT

- **60–70 day receivables**; Vikash spends **15–20% of time chasing payments** — biggest drain.
- **4-sheet disconnected pipeline** (Generated→Emailed→Responded→Meetings); monthly metrics assembled by hand.
- **LinkedIn feed-only sourcing** (~9,500 connections); no Sales Navigator/keyword search.
- **Manual 1-by-1 WhatsApp broadcasts** to 20–30 contacts; no tracking.
- Custom Canva/PPT per NGO (~20% BD time); no template library.

TOOLS: 4-tab Google Sheets · LinkedIn · Contactout · Apollo AI · Canva/PPT · Gmail · WhatsApp · Google Meet

BD Verticals, Sales & Finance Findings

BD — Government

Shailendra Singh & Ankit Jain. 1.7 → 3.0 (highest BD baseline)

- **CBDO tasks managed entirely via WhatsApp groups** — no persistent task trail; slips through cracks.
- **3 Demand- Draft methods**, only 1 documented in audit.
- **Per-Pradhan & per-exec photo capture** → WhatsApp → manual download/re-upload to Drive (~25% capacity).
- **Leave/travel not on Google Calendar**; manual infeasible in low-network areas.
- External custom trial-tracking software (separate dev) in use.

TOOLS: Google Sheets ("replaces CRM") · Google Drive · Calendar (no Zoho link) · Zoho People · Canva/PPT (Vandana) · WhatsApp

BD — B2B & RCM

Jatin Jain. 1.3 → 3.0. Corporate + white-label + RCM (~10,000 retail stores), 40 MT

- **Tertiary invisibility** below RCM depot tier (~10k stores); no RCM ERP API; reactive 40kg alerts.
- **Paper-diary field data** → manual transcription by Back Office (Anil); ~20% capacity.
- **~90% comms on personal WhatsApp** — "corporate IP walking out the door daily."
- **90% WhatsApp-funnel drop-off** (200 active of 2,000); no retargeting/FAQ automation.

TOOLS: WhatsApp (personal, 90%) · Paper diaries · Google Sheets (back-office transcription)

MENA & International Sales

Neha Pathak. 2.0 → 3.1

- **Single-point Logistics constraint** — export days consume 100% of Nihal's capacity; factory→port min 1 week.
- **No CRM** — distributor pipeline in Google Sheets; no stage-gating; no COO visibility above SPOC.
- **No automated remittance alerts** — Neha manually warns Accounts before dispatch (~30 min/shipment).
- **Relationships on personal SIM & WeChat** (China) — company has no contact record on exit.
- Manual email/LinkedIn outbound; no scraping/nurturing.

TOOLS: Google Sheets (dual trackers) · Gmail · Slack (ME) · WeChat (personal) · WhatsApp (personal)

Finance & Accounts

Shobha Shekhawat. 2.2 → 3.3. 3-person team

- **50–77% COGS margin swings** — Zoho Inventory can't value WIP/grade costs; manual FIFO in Sheets (~15% time).
- **GST/TDS recon vs portals** for 100+ claims takes 1–2 months (~35% monthly capacity).
- **No real-time stock visibility** — phone calls to Production before every invoice.
- **Zoho Books reports value not tonnage/SKU** — manual KG/MT mapping in Excel.
- Manual fixed-asset/depreciation journals; 30-day CXO decision delay.

TOOLS: Zoho Books/Expense/Payroll/People · Google Sheets · WhatsApp (bills) · Drive · Govt GST/TDS portals

Marketing, Production, R&D, Logistics & HR Findings

Marketing & Retail Sales

Gaurav Jain. 1.4 → 3.1 (largest gap)

- **10,000+ WhatsApp msgs/day managed by one person** (Kamakshi) → manual transfer to Sheets/Drive. Single point of failure.
- **Manual attendance** — RSM/ASM location drops 3×/day; Kamakshi reads coords, types to Excel (6–8 hrs/day).
- **Hand-written PO images** on WhatsApp; Kamakshi creates bill manually → Logistics + Accounts.
- **Payment screenshots verified via WhatsApp** — 3 manual steps, no structured handoff.
- Vandana (brand/social) checks LinkedIn/FB/IG separately; no unified analytics.

TOOLS: WhatsApp (4+ groups) · 6+ Google Sheets trackers · Drive · Zoho Books (read-only) · LinkedIn/FB/IG · Gmail

Production & QC

Rishabh Doshi. 1.5 → 3.2. Produce-to-Stock + SFG model

- **Abandoned custom Zoho WMS** (failed adoption) — reverted to 5+ Sheets; real-time visibility "non-existent."
- **Custom-packaging MOQ friction** — low-MOQ orders wait to combine → dead-stock surplus.
- **Last-minute sales orders → unplanned overtime**; overtime not in COGS.
- **QC cross-verification scattered** across Drive/Sheets; verbal sign-offs, no audit trail.
- Packaging design approval lost in WhatsApp/Email threads.

TOOLS: Google Sheets (system of record) · Drive · WhatsApp · Slack/Email (intl/auditors) · ~~Zoho WMS (abandoned)~~

Research & Development

Ritu Panwar. 1.5 → 3.2. India/US/EU/Japan

- **Severe key-person dependency** — all approvals/grants/intl sign-offs bottleneck on Ritu alone.
- **Trial data across 8–10 disconnected Sheets**; redundant testing, data loss.
- **No trial-cost monitoring** — validation is largest cost center, untracked.
- **Asana abandoned**; PM reverted to manual follow-up; can't see team workload.
- Info flow to Sales/BD broken — QC queries take 28–30 hrs; Field POC 2–3 months.

TOOLS: Google Sheets (8–10) · Docs/Slides · Drive · Power BI (onboarding, Shubham) · Paper AI · ~~Asana (abandoned)~~ · WhatsApp/Slack/Gmail

Logistics & Dispatch

Nihal M Paliwal. 1.6 → 3.0. Domestic B2B + 10–15 intl/mo

- **70–80% domestic orders via WhatsApp** missing fields (pin, GST, SKU, packaging) — **10–25 min/order** chasing Sales.
- **Zoho Books / Sheets / Drive = 3 silos**, zero automation; double data entry (~30% daily time).
- **No real-time vessel visibility**; prepone/postpone unpredictable → vessel misses.
- **Unforecasted custom-packaging delays** (15–20 days + MOQ); reactive ordering.
- **CXOs call Nihal for every shipment status**; no searchable tracking record.

TOOLS: WhatsApp (70–80%) · Google Sheets (manual) · Zoho Books (Accounts-operated) · Drive · Email · Slack · physical gate passes

Human Resources

Dolly Mehta. 1.6 → 3.4 (highest target). 5-member, 3 verticals

- **Sourcing across 6+ platforms** (LinkedIn/Naukri/Indeed/Apollo/SalesIQ + GPT/Perplexity) on disconnected Sheets; 30–45 day close.
- **Manual pre-screening ~10 min/profile**; 30–40/day — largest time sink.
- **Admin tickets on WhatsApp/email, zero tracking** — client stated **admin & engagement = #1 priority**.
- **Subjective manual PMS**; "cannot automate incentives"; decoupled from ops data.
- **No policy self-serve** — BD/Sales DM HR on travel/stay/reimbursements; client requested AI chatbot.
- No e-signature; field-attendance tracking failed (now WhatsApp location → manual Sheets).

TOOLS: Zoho People (20 paid seats only)/Payroll · 5+ Google Sheets · Drive · WhatsApp · LinkedIn/Naukri/Indeed · Apollo/SalesIQ · GPT/Perplexity

Note on items the software cannot fix alone: dual reporting line (BD Seed), solo-person coverage (BD Seed, Logistics, Retail-data), vacant roles (Marketing Mgr, South India BD), and headcount vs temp-seat limits (Zoho People) require **process or hiring decisions**, not just the shared platforms. They are called out so they are not lost in the build.

SECTION 11 — CLOSING

One Company, One Operating System

The 15 audits told 15 versions of the same story. This roadmap writes the single ending.

Every department's pain — the CEO's manual data harvesting, the COO's inbox saturation, the CBDO's missing CRM, Finance's COGS blindness, Retail's WhatsApp chaos, Production's abandoned WMS, R&D's scattered trials, Logistics' phone-call tracking, HR's manual screening — traces back to the same root cause: **data that moves only when a person carries it.**

The seven shared platforms in this roadmap fix that root cause once, for everyone. A sale entered in the CRM updates Production demand, triggers Finance invoicing, surfaces on the CXO cockpit and informs the next forecast — automatically. A WhatsApp message in a field group becomes a structured CRM record, an attendance entry and a Drive document — automatically. A policy question gets an instant answer from the Knowledge Brain — automatically.

Delivered in four quarters, with working software every three months, the company moves from a 1.6 "ad hoc" maturity to a 3.2 "defined & integrated" maturity — while reclaiming roughly **375 working days of capacity per year** and lifting every audited function without building 15 disconnected systems.

Next step: approve the Q1 scope (Approval Engine, Knowledge Brain MVP, WhatsApp Agent v1, Prod-Logi ERP foundation) and the client to-do list, so the foundation quarter can begin. Every subsequent quarter is gated on the prior quarter's foundation being live.

Roadmap at a Glance

QUARTER	MATURITY	THEME	HEADLINE DELIVERABLES
● Q1 · Months 1–3	1.6 → 2.2	Foundation & quick wins	Approval Engine · Knowledge Brain MVP · WhatsApp Agent v1 · Prod-Logi ERP foundation
● Q2 · Months 4–6	2.2 → 2.8	Core platforms roll-out	Unified CRM · EF OS CXO Dashboard · Finance Engine · HR/Admin/L&D Phase 1 · Logistics scheduler
● Q3 · Months 7–9	2.8 → 3.1	AI & cross-dept automation	Knowledge Brain SSOT · WhatsApp Agent v2 · ERP intelligence · HR PMS & L&D
● Q4 · Months 10–12	3.1 → 3.2	Scale & international	Full EF OS integration · MENA/international scale · Vendor portal · Predictive & governance layer

Prepared by **Creative Upaay** (brand owned by Cinnovate Solutions (OPC) Private Limited) for EF Polymer Private Limited. This roadmap consolidates the findings and solutions of the 15 CXO & department-level operational audit reports issued on 17th July 2026 (v1.0). All maturity scores, ROI figures, findings and cross-department dependencies are drawn from those reports; the consolidation into seven shared platforms and the four-quarter sequencing are the audit team's synthesis.
